

Post-flight revision

This checklist may vary depending on the operation and platform, as it is only an example provided by Embention as an aid.

Therefore, each customer should have its own checklist.

<i>"Revision and checks pre-flight"</i> checklist completed	
Visual inspection: Perform a superficial visual inspection of the platform in order to find possible damages occurred during the operation.	
Battery management (if applicable): Store the batteries in the corresponding place and charge them up to the recommended voltage for storage.	
Internal logs: Download internal logs for debrief. For this, the Veronte FDR software should be used.	
Cleaning and storage (if applicable): Clean the platform and then store it in its corresponding place.
